                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Genes with similarity to proteins in the databases are described as 'putative', '-like' or 'similar to'. Genes that have BST similarity but no significant protein similarity are described as 'unknown proteins'. Genes that are amoutated only on gene prediction software are described as 'hypothetical proteins'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/section/index.html), GENSCAN (Chris Burge, http://gnomic.stanford.edu/~chris/GENSCANW.html), Pexa (V.Solovyev & A.Salamov, Sanger Centre, http://genomic.stanger.ac.uk/), and NetPlantGene (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, http://www.cbs.dtu.dk/NetPlantGene.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pederspiel, N.A., Palm, C.J., Conway, A.B., Conn, L., Hansen, N.F., Altafi, H., Araujo, R., Huizar, L., Rowley, D., Buehler, E., Dunn, P. On Jun 1, 2004 this sequence version replaced gi:34740243.
Genes were predicted from the integrated results of the following:
GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH
(http://www.softberry.com//, GeneMark/), GlimmerM
(http://www.softberry.com//, GeneMark/), GlimmerM
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHMM/), BLASTN and BLASTX. The
genomic sequence was searched against NCBI NonRedundant Protein
database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA
sequence database at RGP or DDBJ Protein homologies of the coding
regions were searched against NCBI NonRedundant Protein database
with BLASTP. ESTs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Full-length cDNAs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               classified based on the protein name to indicate the homology level such as same name, 'putative.' and '.like protein'. A gene without significant homology to any protein but with full length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from -21Ml3 to Ml3rev of the BAC clone. This sequence of OJ1293_EO4 clone has an overlap with OSJNBa0053L11 (DDBU: AP005691) clone at 5' end and with P0643F09 (DDBU: AP005111) at 3' end. The sequence was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is available at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       http://rgp.dna.affrc.go.jp/GenomeSeq.html.

A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OSJNBA005311 clone has an overlap with P0016F11 (DDBJ: AP004120) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rm.dna.affrc.orienGenerger.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               available

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present sequence encodes for Arabidopsis thaliana
CC lecithin:cholesterol acyltransferase=like 2 (LCAT2). Several novel
CC polynuclectides encoding the plant sterol acyltransferases LCAT
CC (AASO01081-AAS01104, AAS01341) and ACAT (acyl COA:cholesterol
CC eacyltransferase-like; AAS01341) and ACAT (acyl COA:cholesterol
CC related open reading frame, LRO1 gene sequence (AAS01342), and a rat ACAT
CC (AAS01105) cDNA sequence are also described. The polynuclectides encoding
CC LCAT or ACAT are used to produce LCAT or ACAT polypeptides. They can also
be used in a recombinant construct to transform a host cell (preferably
CC derease the sterol content of the host cell or plant. It can be used to
CC alter oil production of the cell or plant, preferably by increasing it.
CC The oil of the plant or the plant itself is used as a food product, or as
CC untritional or distary supplements, or in pharmaceutical compositions for
CC lowering cholesterol. The oil can be used in foods e.g. margarine,
CC cheese, processed meat, pasta, sauces, cereals, desserts, dipp, chips,
CC baked goods, pastries, cookies, snack bars, confections, chocolates, and
CC beverages. The alteration in sterol content and/or composition can also
CC provide a plant with tolerance to stress and insect damage

CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) CC; (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, (2) a vector comprising (II) CC comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell and a growth medium preparing a host cell culture and recovering the improved active membrane independent acyltransferase polypeptide; (5) a polypeptide obtained by the method in CC independent acyltransferase polypeptide; (6) an oligonucleotide comprising the above polypeptide; (6) an oligonucleotide comprising the above polypeptide at least is an improved active membrane independent conditions; and (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid CC molecule (I) and the polypeptide are useful in producing structured CC lipids or fat-soluble molecules, in removing undestrable fat or in CC modifying lipids present in animal and plant raw material. The present xx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a nucleotide sequence (I) derived from nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-MAY-2002; 2002SE-00001581.

The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis thaliana PDAT genomic DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    increase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to

                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                  The present sequence for corn LCAT (lecithin:cholesterol acyltransferase-CC like) EST sequence #3 is closely related to the Arabidopsis thaliana CC LCATZ sequence. Several novel polynucleotides encoding the plant sterol CC cayltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC cA; cholesterol acyltransferase-like; AASO1311-AASO1341) are described. A CC yeast LCAT (Easterol acyltransferase-like; AASO1311-AASO1319) are described. A CC polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT (CC polypeptides. They can also be used in a recombinant construct to polypeptides. They can also be used in a recombinant construct to construct is used to increase or decrease the sterol content of the host CC cell or plant. It can be used to alter oil production of the cell or CC plant, preferably by increasing it. The oil of the plant or the plant CC itself is used as a food product, or as nutritional or dietary CC supplements, or in pharmaceutical compositions for lowering cholesterol. The oil can be used in foods e.g. margarine, butter, cooking oil, and dressings. confections, chocolates, and beverages. The CC cookies, snack bars, confections, chocolates, and beverages. The alteration in sterol content and/or composition can also provide a plant content and/or composition can also provide a plant can be trace to stress and insert damage.
                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                             The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Lycopersicon esculentum PDAT nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Phospholipid:diacylglycerol acyltransferase enzymes in the bio pathway for triacylglycerol production and DNAs encoding them, producing triacylglycerol, or for transforming any cell or org

                                                                                                                                                                                                    The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Lycopersicon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                  The present sequence for corn LCAT (lecithin:cholesterol acyltransferase-CC like) EST sequence #4 is closely related to the Arabidopsis thaliana CC LCATZ sequence. Several novel polynucleotides encoding the plant sterol CC cayltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC cA:cholesterol acyltransferase-like; AASO1311-AASO1319) are described. A CC yeast LCAT related open reading frame, LRO1 gene sequence (AASO1342), and CC arat ACAT (AASO1105) cDNA sequence are also described. The CC polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT construct is used to increase or ACAT are used to produce LCAT or ACAT construct is used to increase or decrease the sterol content of the host CC coll or plant. It can be used to alter oil production of the cell or CC cell or plant. It can be used to alter oil production of the cell or CC plant, preferably by increasing it. The oil of the plant or the plant cc itself is used as a food product, or as nutritional or dietary construct is used as a food product, or as nutritional or dietary coll can be used in foods e.g. margarine, butter, cooking oil, and CC dressings e.g. salad dressings, mayonnaise, cheese, processed meat, CC pasta, sauces, cereals, desserts, dips, baked goods, pastries, CC cooktes, snack bars, confections, chocolates, and beverages. The CC alteration in sterol content and/or composition can also provide a plant or content and or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or content and or composition can also provide a plant or co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid encoding plant lecithin:cholesterol acyltransferase acyltransferase-like or acyl (coenzyme A) CoA:cholesterol acyltransferase-like polypeptides, for modifying the sterol content and oil production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lassner

The present invention describes a nucleotide sequence (I) derived from nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent acyltransferase polypeptide can produce fatty acid esters and/or fatty acid thioesters such as triacylglycerols, diacylglycerols,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 fatty acid thioester; triacylglycerol; diacylglycerol; monoacylglycerol; phospholipid; glycolipid; lysolipid; waxester; acylated carbohydrate; acylated amino acid; structured lipid; fat-soluble molecule; gene; ds.
                                                                                                                                                                                   New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Schizosaccharomyces

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated anino acids. Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked Ct to at least one (I), which is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell culture and harvesting the lost cell culture and recovering the improved active membrane independent acyltransferase polypeptide at least is an improved active membrane (C (4), where the polypeptide at least is an improved active membrane (2) acyltransferase polypeptide at least is an improved active membrane (2) acyltransferase polypeptide at least is an improved active membrane (3) acyltransferase polypeptide at least is an improved active membrane (2) acyltransferase polypeptide at least is an improved active membrane (3) acyltransferase polypeptide at least is an improved active membrane (4), where the polypeptide at least is an improved active membrane (2) acyltransferase polypeptide and a stabiliser. The nucleic acid (3) active comprising the above polypeptide and a stabiliser. The nucleic acid (3) active membrane (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid (4) in the polypeptide active membrane independent conditions; and (7) a kit comprising lipids present in animal and plant raw material. The present on modifying lipids present in animal and plant raw material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

```
CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one (I), which is operably linked to at least one comprising (II) or the vector; (4) producing an CC translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, (CC comprising providing the above host cell culture and harvesting the host cell culture and harvesting the cell culture and harvesting the cell culture and recovering the host cell culture and harvesting the cell culture and polypeptide at least is an improved active membrane independent acyltransferase polypeptide; (5) a polypeptide obtained by the method in CC independent acyltransferase polypeptide; (6) an oligonucleotide comprising the above polypeptide and a stabiliser. The nucleic acid CC comprising the above polypeptide are useful in producing structured CC injude or fat-soluble molecules, in removing undestrable fat or in CC modifying lipids present in animal and plant raw material. The present or comprising the seemal interesting the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 12; SEQ ID NO 2;

The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence encodes yeast (Saccharomyces

                                     The present invention describes an enzyme for catalysing (in an acyl-Co independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism. The present sequence represents the yeast (Saccharomyces cerevisiae) PDAT gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-APR-1999;

The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacyl-glycerol in the biosynthetic pathway for the production of triacyl-glycerol (TAG). The enzyme is designated as phospholipid:diacyl-glycerol acyl-transferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (lecithin:cholesterol acyltransferase-like; Assoli081-Assoli04, Assoli34)
CC and ACAT (acyl CoA; cholesterol acyltransferase-like; Assoli31-Assoli34)
CC and ACAT (acyl CoA; cholesterol acyltransferase-like; Assoli311-Assoli319).
CC A rat ACAT-like cDNA sequence (ASsoli05) is also described. The
CC polymucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT
CC polymeptides. They can also be used in a recombinant construct to
CC transform a host cell (preferably of a plant) or a plant. The recombinant
CC construct is used to increase or decrease the sterol content of the host
CC cell or plant. It can be used to alter oil production of the cell or
CC plant, preferably by increasing it. The oil of the plant or the plant
CC itself is used as a food product, or as mutritional or dietary
CC supplements, or in pharmaceutical compositions for lowering cholesterol.
CC The oil can be used in foods e.g. margarine, butter, cooking oil, and
CC dressings e.g. salad dressings, mayonnaise, cheese, processed meat,
CC pasta, sauces, cereals, desserts, dips, baked goods, pastries,
CC pasta, sauces, cereals, desserts, dips, baked goods, pastries,
CC pasta, sauces, corsent and/or composition can also provide a plant
CC with tolerance to stress and insect damage
acyltransferase; enzyme; membrane-spanning region; active membrane independent acyltransferase; fatty acid ester; fatty acid thioester; triacylglycerol; diacylglycerol; monoacylglycerol;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid encoding plant lecithin:cholesterol acyltransferase-like or acyl (coenzyme A) CoA:cholesterol acyltransferase-like polypeptides, for modifying the sterol content and oil production of plants.
                                                                                                                                                                                                         ADF47816 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1986
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (LRO1) is described in an invention relating to several novel polynucleotides encoding the plant sterol acyltransferases LCAT

New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw

Claim 5; SEQ ID NO 1; 91pp; English

CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, cc acid thioesters such as triacylglycerols, diacylglycerols, waxesters, cc monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, cc acylated carbohydrates and acylated amino acids. Also described: (1) a comcleotide sequence molecule (II) comprising at least one promoter region which functions in a host, where the promoter region is operably linked to at least one (II), which is operably linked to at least one for translated region which functions in a host; (2) a vector comprising (II) cc translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an cc improved active membrane independent acyltransferase polypeptide, comprising providing the above host cell culture and harvesting the host cell culture and recovering the host cell culture and harvesting the cc host cell culture and recovering the improved active membrane independent acyltransferase polypeptide obtained by the method in cell culture the polypeptide at least is an improved active membrane independent acyltransferase polypeptide and a stabiliser. The nucleic acid comprising the above polypeptide are useful in producing structured clipids or fat-soluble molecules, in removing undesirable fat or in codifying lipids present in animal and plant raw material. The present conditions is used in the exemplification of the present invention. amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one The present invention describes a nucleotide sequence (I) derived from a a
